```
var objl={
   name:'zjamh',
   age:'18'
var objb={
 age:'18',
 name:'zjamh',
const compareJsonObj = (obj1, obj2) => {
 let result = true
 if (!isJsonObj(obj1) || !isJsonObj(obj2)) return false
 for (let key in obj1) {
   if ((obj1[key] && !obj2[key]) || (!obj1[key] && obj2[key]) || (obj1[key] && obj2[key] && (obj1[key]).toString() !== (obj2
     break;
 return result
 function isJsonObj(data) {
   return (data && Object.prototype.toString.call(data) === "[object Object]")
console.log(compareJsonObj(objl,objb))
```
